

Miro Mariapori

Full-stack Software Developer | React, Next.js & Node.js

SUMMARY

Full-stack developer with a strong focus on practical web development. I have built React and Next.js user interfaces, Node.js services, GraphQL and REST APIs, database-driven applications, and automation in internship and freelance projects. I understand systems quickly, move work forward independently, and write code that is easy to continue building on. I am looking for my next full-stack developer role where I can help build reliable web products for real user needs.

CORE STRENGTHS

Full-stack web applications with TypeScript, React, and Next.js, Backend services, GraphQL/REST APIs, and integrations, Database-driven applications with PostgreSQL and MongoDB, Automation and data processing with Python and Node.js, Independent ownership from customer need to deployment

WORK EXPERIENCE

Software Developer

Helsinki XR Center • 1/2024 - 3/2025

- Developed a healthcare software platform in a full-stack role for designing, delivering, and analyzing physiotherapy exercises
- Built and maintained a GraphQL backend connecting web applications with backend services
- Implemented React-based user interfaces for exercise management, planning, and user feedback
- Designed motion-data processing features for exercise analysis and user feedback
- Implemented a neural-network-based motion analysis solution trained on 1000+ physiotherapy exercises
- Contributed to browser-based visualizations as part of the broader application
- Handled authentication, data protection, and sensitive user data considerations in the implementation

Software Developer

Freelance • 8/2022 - Present

- Deliver customer-specific software solutions, automations, websites, and plugins based on client needs
- Define the customer's problem, scope the implementation, and take projects independently into use
- Developed a Python-based Telegram bot for automated data collection and data processing
- Built and maintained WordPress-based solutions, including custom plugins and platform-specific integrations

Personalized Internet Ads Assessor

TELUS International • 5/2023 - 9/2023

- Evaluated the relevance and quality of online advertisements against user searches in an international quality-assurance environment, strengthening accuracy in data-driven evaluation work

Terminal Worker

DHL Express • 6/2018 - 8/2020

- Worked in time-critical air freight operations where precision, process discipline, and responsibility for smooth logistics were essential

Trainee

Hexagon Manufacturing Intelligence • 9/2015 - 5/2016

- Programmed coordinate measuring machines, performed product measurements, and assisted with customer communication and sales-related tasks

TECHNOLOGIES

Programming languages: TypeScript, JavaScript, Python, C#, SQL

Frontend: Next.js, React, React Native, HTML5, CSS3, Tailwind CSS

Backend and APIs: Node.js, Express.js, GraphQL, REST, WebSockets, OAuth2, JWT

Data and infrastructure: PostgreSQL, MongoDB, Redis, Docker, Azure, Nginx, GitHub Actions, Git

Automation and data: OpenAI, TensorFlow, Data Processing

Other: .NET, WordPress

PROJECTS

Route Management System for an Autonomous Tracked Articulated Vehicle (thesis)

- Designed and implemented a full-stack software layer for autonomous vehicle route management as part of Metropolia's KOTKA project in cooperation with the Finnish National Defence University
- Built a React and Leaflet-based map interface for defining, storing, and monitoring vehicle-specific route plans
- Implemented a TypeScript Node.js WebSocket server that routes commands to the correct vehicle identifier, manages vehicle state, and publishes real-time status updates
- Implemented a command-line vehicle simulator for validating route execution and status updates with multiple simulated vehicles before integration with a real vehicle interface

Gamified Joint Rehabilitation, Analysis and Training (GameRAT)

- Developed a healthcare software platform in a full-stack role for designing, delivering, and analyzing physiotherapy exercises
- Built and maintained a GraphQL backend connecting web applications with backend services
- Implemented React-based user interfaces for exercise management, planning, and user feedback
- Designed motion-data and neural-network-based features for exercise analysis and user feedback

TKIO-Finder

- Built a full-stack platform that improves the discoverability of Metropolia University of Applied Sciences' research and innovation projects
 - Implemented search, filtering, and matchmaking features using React, Node.js, and PostgreSQL
 - Added Google OAuth2 authentication for secure and user-friendly login
 - Deployed and maintained backend services in a self-managed environment, including server-side infrastructure management
-

EDUCATION

Bachelor of Engineering, Information and Communications Technology

Major: Software Engineering

Metropolia University of Applied Sciences

Graduation: summer 2026 (estimated)
